

Make today a breakthrough.

February 25, 2025

Dear Congressional Leader:

We respectfully ask that you address the needs of individuals and families impacted by spinal muscular atrophy (SMA), a devastating neuromuscular disease, by supporting new federal SMA research. In your fiscal year (FY) 2026 request letter to the Defense Appropriations Subcommittee, please request peer-reviewed SMA research at the U.S. Department of Defense (DOD) through a separate program line or as part of DOD’s peer-reviewed medical research program.

SMA is a debilitating neuromuscular disease that causes irreversible nerve damage and severe muscle loss that significantly impairs a person’s ability to walk, breathe, and perform ordinary daily activities. The degenerative disease results from about 1 in 50 Americans being a SMA carrier, including an estimated 384,000 military service members and veterans.

With DOD-targeted SMA research, our country has an opportunity to further change the trajectory of this genetic condition and use the findings and learnings to reverse muscle loss, restore nerve damage, and regain motor function that impact so many Americans, including those who have served our nation in uniform. Past public and private research focused on the genetics of the disease have led to three U.S. Food and Drug Administration-approved treatments. Additional SMA research is needed to develop new therapies to address the common goals of individuals who suffer from disorders and injuries impacting the spine, nerves, and muscles.

The SMA community, including military and veteran families across the country, are desperate for new SMA research to address these debilitating symptoms. Please support them by prioritizing SMA research in DOD’s FY 2026 Defense Health Program budget.

Thank you for your consideration.

Sincerely,

Cure SMA Families and Supporters of Individuals with Spinal Muscular Atrophy
